

Tempest 3D CAD Downloads

July 5th, 2018

Due to the number of Tempest customers using a variety of CAD programs, we are now offering simple 3D CAD blocks in the universal STEP file format.

STEP files are compact and can be imported into virtually all CAD systems. Please see your CAD software manual for import instructions.

Each Tempest Enclosure family now has a zip file for download containing all the available 3D CAD blocks for that family. Just unzip the downloaded file and save to your hard drive.

Note: Tempest is a Kaizen company, and our product designs are evolving constantly. Be sure to use the most current version to avoid costly mistakes on the job site...
