Active Cooling
Systems

Oasis Outdoor Projection Active Cooling Systems

Now you can safely operate sensitive laser projectors in any environment with temperatures from -15 to 50°C (5-122°F), while maintaining a CONSTANT temperature where you need it — at the projector air inlet.

Get the maximum life out of your laser light engine, and say good-bye to RGB color shift with changing ambient temperatures.

Oasis uses highly efficient inverter heat pump technology to maintain its set temperature regardless of outside conditions, either when the system detects the projector is active, or when the internal temperature reaches a user-set temperature with the projector in standby mode.

In low ambient temperatures, Oasis maintains a minimum temperature, using a thermostatically controlled heater inside the enclosure.

Oasis models are tailored specifically for each projector type, from 5,000 to 50,000 lumens.

Each Oasis model has been tested and approved with its designated projector before being released for production.

Oasis comes with all the features you expect from Tempest:

- IP66 Protection Class
- Landscape, portrait, and many UST lens options
- Many rigging options
- Tough Aluminum welded construction
- Large access doors both sides for projector access

- User interface for setup and monitoring
- Available TCP/IP, RDM, or web-based monitoring

Oasis comes as standard with 5m (16') line set connecting the suit-case-style compressor unit with the enclosure. A simple and inexpensive installation process is easily handled

by any local HVAC installer.

Enclosure User Interface

Cooler set point, IR remote sensor for schedule programming

ODU control cable

High-pressure line set: Standard length 5m (16'). Other lengths available.

Single or Multizone Outdoor Compressor Unit (ODU):

- Quiet, high output variable speed compressors
- Internal coating for salt fog protection
- Very low starting current
- High-capacity suction accumulators
- Optional heavy-duty vibration mounts
- Durable outdoor fan with high glass content
- Efficient, permanently lubricated EC/DC outdoor motor
- Internal overload protection
- Flare type refrigerant connections
- R410A Refrigerant
- ETL Outdoor Rating

Oasis

Outdoor
Projection
Active Cooling
Systems

Single Systems, Multizone Systems

A single projector? No problem. Your Oasis enclosure comes with its own dedicated compressor (ODU), and interconnecting line set — everything you need.

But it often happens on big mapping jobs that projectors will be grouped around the site, in clusters of two or more. That's where Oasis Multizone systems come in. Now you need only a single multizone ODU to serve up to five Oasis enclosures.

Multi-zone systems still give you individual temperature and scheduling control for each enclosure, and the projector and enclosure types don't have to be the same, so Oasis Multi is both practical and extremely flexible.

The maximum line set length from ODU to enclosure is 15m (50ft), so the enclosures in each multi-zone cluster don't even have to be so close together!

Oasis 59.310 Enclosure, complete with ODU and line set.

Four Oasis 59.310 Enclosures, complete with Multi-zone ODU and line sets.

The number and heat load of the projectors in each Multi-zone Oasis system will affect the selection of components for each system.

Please contact Tempest to discuss the optimal configuration for your Oasis Multizone systems.

Oasis

Outdoor Projection Active Cooling Systems

Portrait Oasis enclosures allow $\pm 5^\circ$ tilt adjustment to compensate for limited H-shift

Large, insulated access doors both sides for excellent projector access

Oasis 210 and up: projector exhaust is ducted to return warm air to the fan coil, for high thermal efficiency

Oasis projector mounts are indexed for accurate repositioning after projector service

Thermal Insulation lining for optimum efficiency

Oasis 59.525P Portrait Enclosure, with Panasonic PT-RZ50K

Oasis 59.1xx models come with universal projector mounts: if the projector fits, it works.

Simple Installation

All wiring connections are easily accessible via the enclosure back panel.

The high-pressure line set connections must be made by a licensed HVAC installer. This is a simple process, identical to setting up a mini-split AC unit.

- DEC User Interface
- Cooler set point display and IR sensor
- DEC enclosure controller
- Wiring compartment
- Neutrik PowerCon True 1 TOP cooler power connector
- Power & signal conduit entries
- Line set Gasket

Automatic Operation

Just set the desired temperature set point and upper and lower temperature limits, and we'll take care of the rest.

Tempest's patented Digital Enclosure Control (DEC) technology makes sure that the cooler runs when either the projector is on, or the daytime temperature exceeds your preset target.

The cooler automatically maintains the set point at all times, within a very tight margin, due to Oasis' variable speed inverter technology. And you can even set different set points for different times of day!

Cold? Don't worry — Oasis' heater maintains a minimum preset temperature in cold climates, so the projector will never have trouble firing up at show time.

Important: If ambient temperatures below -15°C (-5°F) are expected, consult Tempest.

Projection
Active Cooling
Systems

Rigging Options

All Oasis enclosures come with six M12 threaded sockets on the top surface, and four on the bottom. So you can bolt the enclosure directly to your structure, or use them to attach these Tempest rigging accessories.

Stainless steel bolts are provided for attachment to any suitable support structure.

Tempest recommends only the use of stainless steel hardware for installing enclosures outdoors.

Unistrut Kit

Easy attachment to any structure using these two Unistrut rails. Use standard Unistrut hardware to attach to your structure, without worrying about precise hole locations.

Unistruts may be mounted top (shown here) or bottom; please specify with order.

Note: A Unistrut Kit is required for use with Cyclovator.

*NOTE: Cyclovator
requires 59.UR.xxx
Unistrut Rail Kit*

Cyclovator

Our fabled Cyclovator tucks snugly under the center of gravity of the enclosure.

Use Cyclovator on the ground to cover tall buildings, or on a rooftop to project to ground level. Either way, Cyclovator allows you to project up to about 60° off horizontal, and then bring the projector safely back to horizontal for service access.

You can even bolt this Cyclovator to a truss or other structure and use it to hang any Oasis enclosure at any angle.

And Cyclovator has a positive index ring that you set to come back to your show position with absolute repeatability, time after time...

Angle Mount

A simple fixed angle mounting kit, with a range 10-45° up (shown here) or down — simply mount with the enclosure facing the other way.

55.AM2 Oasis 210-305

55.AM3 Oasis 310, 314, 322

55.AM4 Oasis 320, 514, 525

Oasis

Outdoor
Projection
Active Cooling
Systems

Sun Shade

This aluminum panel mounts easily on the top of any Oasis enclosure to provide extra daytime protection in hot, sunny climates. The cover not only deflects sunlight, but also provides a 75mm (3in) air gap between the shade and the enclosure top, promoting convective air movement. Use in sunny areas with daytime temperatures frequently above 35°C (95°F).

Stacking Kit

Stack two or more Oasis enclosures of the same type using this stacking kit.

Male and female parts attach to the threaded corner holes, and are simply joined together using stainless steel clevis pins.

Maximum two enclosures stacked if hung, up to three with ground support.

Swivel Stacking Kit

Stack two Oasis enclosures (must be the same model), and angle them horizontally up to 40 degrees apart — handy for short-throw edge blending jobs.

Stainless steel stacking kits attach to M12 rigging points, and locking bolts are provided to secure rotation angle when aligned.

Custom Rigging Options

Don't see what you need? We do a lot of custom designs and we'll be happy to work with you to find the best solution for your project.

Oasis Outdoor Projection Active Cooling Systems

Tempest System Manager is a Windows app running on a local PC connected to your enclosures over a local area network.

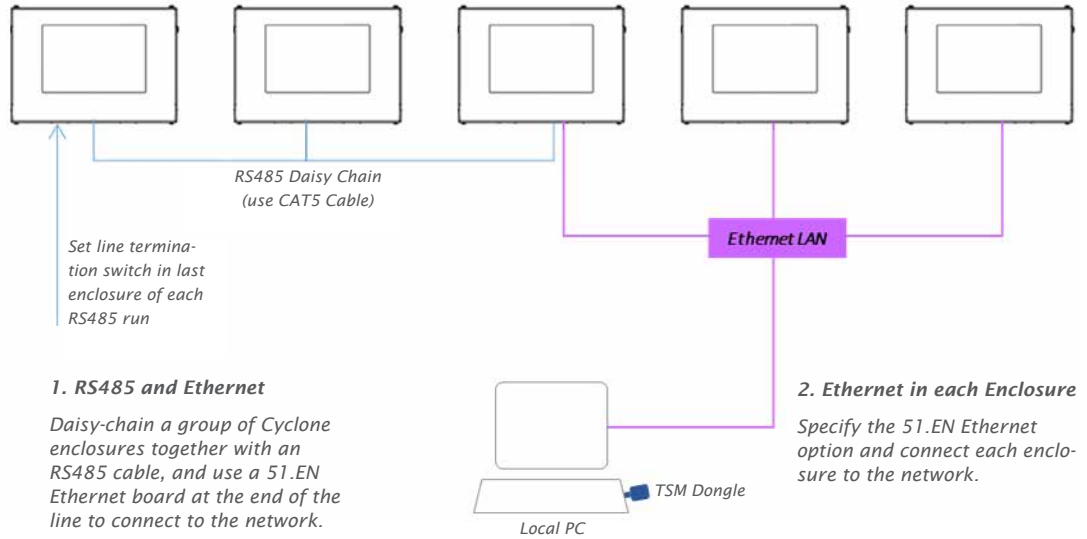

TSM discovers any Tempest enclosures present on the network at initialization, and monitors system attributes in real time, including lamp, fan and heater status, temperature, relative humidity and more.

TSM may also be used to upload firmware updates to enclosure controllers over the network, without having to visit each enclosure.

The TSM license includes 12 months unlimited user support from Tempest electronics partner JESE, and continuing support is available for a modest annual fee.

Monitoring Connections

There are two ways to connect enclosures to the TSM PC:

Tempest System Manager

Index	Description	Label	Status	Voltage	Current	RH%	Temp °C	Htr %	Fan %
