Breeze Outdoor Projector Enclosures

Tempest, undisputed world leader in projector enclosure technology, introduces Breeze, a family of outdoor enclosures for most projector types between 3,000 and 14,000 ANSI Lumens.

You asked us for a simple solution, to bring outdoor operation within the budget of more of your projects, but without sacrificing Tempest build quality — and Breeze is our answer!

- *Four models cover most projectors in landscape orientation, between 3,000 and 14,000 ANSI lumens*
- *Optical grade tempered port glass*
- *Universal projector mount grips projector firmly with pan, tilt and roll adjustment*
- *Universal IEC C13 projector power outlet, including rewirable plug (no-one ever has one!)*
- *Forced-air ventilation runs when the projector lamp is on, or when the temperature inside the enclosure exceeds 35°C*
- *Operation is completely automatic*
- *Electrostatic dust filter can be removed and washed when needed*

Breeze 58.150, for most projectors 12-15,000 ANSI lumens.

- *Thermal barrier inside cover for daytime protection under hot sun*
- *Simple rigging via 4 M8 screws*
- *Hanging Adapter Kit included*
- *Single or split feed wiring*
- *Attractive light bronze powder coat finish*

Breeze models come in 100-125V and 200-250V versions for North American/Japanese and International markets respectively.

Operating Temperature Range

Breeze may be used safely in locations where minimum temperatures do not fall below 0°C [32°F].

Maximum ambient temperatures when the projector is running (usually after dark) should not be higher than 2-3°C below the projector's stated maximum environmental limit. So, for a projector with a 45°C limit, ambients up to around 42° are ok. During daytime the enclosure fan will run automatically if the internal temperature exceeds 35°C.

Breeze — the Inside Story

Breeze

Outdoor Projector Enclosures

Standard Installation

Simply bolt your Breeze enclosure atop any suitable structure or frame, using the four M8-1.25 threaded holes in the enclosure base.

Wiring Access

Use outdoor-rated flexible conduit or flex cable and outdoor-rated cable glands to connect power and signal cables to the back of the enclosure.

Conduit holes are 22mm [0.875in].

Hanging Installation

Use the four hanging adapter plates provided with threaded dropper rods (up to M12/½"), to hang Breeze from any suitable frame or structure.

Be sure to leave some clearance above the enclosure (minimum 50mm/2in) to remove and replace the cover. Cover may be removed by removing fixing screws and sliding to the front or back.
